

### **The rescueDAYS return to Bostalsee**

**The international rescueDAYS are the world's largest training event for technical assistance. For over 20 years, they have been held every year at different venues in Germany. This year there is an exception - the rescueDAYS are returning to the Bostalsee venue!**

In the middle of the Saar-Hunsrück Nature Park and on the edge of the Hunsrück-Hochwald National Park lies the Sankt Wendeler Land, one of the most beautiful regions in Saarland. "Of course, the scenic beauty offers a special plus for our participants. However, the venue at Bostalsee has proven to be ideal due to the excellent infrastructure and the commitment of the local partners. That is why we are happy to return there!", says Bernd Dürr, Head of Training at WEBER RESCUE.

With an event area of over 60,000 m<sup>2</sup>, the training grounds at Bostalsee offer excellent conditions. In addition, the fire brigade days of the district take place at the same time under the auspices of the fire brigade's development association.

"The rescueDAYS provide a platform to learn about innovative approaches and best practices in accident rescue. This enables participants to expand their knowledge and skills and to be better prepared for a wide range of challenges on the road. Training for fire brigades and emergency services typically covers car, truck and bus rescue. The aim is to learn effective techniques for extricating trapped persons from vehicles. Depending on the type of vehicle and the accident situation, rescue procedures may differ.

Besides learning new rescue techniques, the rescueDAYS also offer the opportunity to exchange ideas with other participants from all over the world. Since technical accident rescue does not work the same way everywhere, the international exchange of knowledge and experience is particularly valuable," says Dürr.

In addition to the original rescueDAYS, where the most important tactics for technical assistance can be trained at a total of seven stations over two days, the new rescueDAYS PLUS focus on additional rescue scenarios.

Accompanying the training, internationally recognised experts will share their knowledge in a one-day symposium.

Registration for rescueDAYS 2023 has been open since the beginning of May. For those interested, be quick, there are only a few places left!

**The most important facts in a nutshell:**

**Date:** 21 - 24 September 2023

**Place:** Bostalsee, Saarland

**rescueDAYS ORIGINAL:** Two-day seminar (Thu/Fri and Sat/Sun) with 7 stations of practical training each.

**rescueDAYS PLUS:** two-day seminar (Thu/Fri and Sat/Sun); focus on additional rescue scenarios

**rescueDAYS Symposium:** German-language lectures by internationally recognised experts

(one-day, Fri or Sat)

**Registration:** since the beginning of May at [www.rescue-days.com](http://www.rescue-days.com)

**About WEBER RESCUE SYSTEMS**

WEBER RESCUE SYSTEMS is an internationally leading, innovative manufacturer of high-quality hydraulic and pneumatic rescue systems for technical assistance. These are used in numerous areas. In addition to fire brigades and technical relief organisations, customers include the military and police. The equipment is also used in a variety of industrial applications, for example in the dismantling and recycling of plants.

With a wide range of additional equipment for a wide variety of applications, WEBER RESCUE SYSTEMS offers everything you need for stabilisation, securing and initial opening. As a pioneer in the digitalisation of aid organisations, WEBER RESCUE SYSTEMS integrates additional digital functions in the rescue equipment and develops apps and software applications for alerting, management and training.

A comprehensive training programme trains rescue workers in the optimal handling and maintenance of the rescue systems. In addition to training courses on technical rescue and courses on testing and maintenance, WEBER RESCUE SYSTEMS organises the rescueDAYS, the world's largest training event for technical rescue.
