VFB MOSBACH

THE LARGEST TRAINING EVENT IN TECHNICAL RESCUE

09.-11. OCTOBER 2026

Following the huge success of rescueDAYS 2025 in Bitburg, the world's largest training event in technical accident rescue is returning to Mosbach. We already held rescueDAYS at the TCRH in 2019 with great success.

rescueDAYS.ORIGINAL stands for intensive, practical training in technical rescue. In revised and modernised stations, current operational scenarios are presented in a realistic manner – from classic traffic accident rescue to complex situations involving alternative drive technologies and new vehicle structures.

With **rescueDAYS.TEAM**, we are presenting a new training concept with a clear focus on crew resource management (CRM) and team-oriented operational management.

The focus is not only on technical rescue, but above all on the interaction of the entire team: communication, decision-making, role allocation, leadership behaviour and error culture are specifically trained and reflected upon. Realistic operational scenarios form the basis for structured debriefings in which processes are analysed and potential for optimisation is identified. The events can be booked in German or English.

The programme is complemented by a door opening seminar with practical opening techniques.

Registration for participation in rescueDAYS will be open from 13 March 2026 at www.rescue-days.com

rescueDAYS ORIGINAL (two-day)

09.-10.10.2026

Training stations

- Modern vehicle technology
